

WHY PHARPOINT?

# Shortening the Time from Last Patient, Last Visit to Database Lock

INDUSTRY AVERAGE

**36 days\***

*from LPLV to  
Database Lock*

**5 days**

*from LPLV SDV to  
Database Lock*

*\*According to research by the Tufts Center  
for the Study of Drug Development for 2017*

## How can PharPoint's data management team lock a database so much **faster than the industry average?**

PharPoint initiates data reviews at the beginning of and throughout a study's life cycle. With this proactive approach, we're able to address data discrepancies as they occur and send site queries immediately as opposed to waiting until the end of a study. The result? Faster timelines, fewer site query errors, and an identification of trends early on to increase data cleanliness.
